Art Unit: 1774

1. Upon reconsideration, the election of species requirement has been withdrawn.

The restriction requirement is maintained for the reasons of record. Upon the allowance of sheet material claims, a writing device employing sheet material of the same scope would be rejoined and allowed.

2. Claims 1-3 and 5-34 are rejected under 35 USC 112 (first paragraph) as being broader than the enabling disclosure as a result of applicant's failure to recite that the "embedded" particles are contained in microcapsules.

3. Claims 5 and 7-9 are rejected under 35 USC 112 (second paragraph) as being indefinite for the reasons set forth below:

A. In claim 5, the scope and meaning of "embedded between the cavities" is not clear; and

B. In claims 7-9 (see claim 7), the scope and meaning of "combined to a carbonless set" (emphasis added) is not clear.

4. Claims 1-4, 14 and 22 are rejected under 35 USC 102 (b) as being anticipated by the patent to Sakurai et al. (U.S.P. 5,006,422).

Claims 1-4, 6, 14, 22 and 24 are rejected under 35 USC 102 (b) as being anticipated by the patent to Nakano (EP 0822532).

5. Claims 15-21, 23, 24 and 31-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over either of Sakurai et al. or Nakano.

These patents teach sheet material for receiving information which employs microencapsulated magnetizable particles. The information is writable, retrievable and changeable. Discontinuous writing areas and the ultimate form of the material (e.g., a

brochure) constitute obvious design choices. Finally, the experimental modification of this prior art in order to ascertain optimum operating conditions (e.g., determine particle sizes) fails to render applicant's claims patentable in the absence of unexpected results.

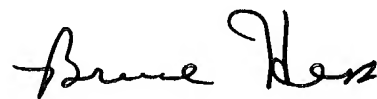

See Sakai et al. at column 1, lines 9-12 and column 4, lines 44-46. See Nakano at page 3, lines 46 and 47.
